- The Americas are two separate continents consisting of North America and South America
- North America contains 23 different countries.
- The Americas cover a huge area of the globe and are surrounded by the Atlantic and Pacific Ocean.
- The characteristics of different countries and regions vary significantly, including weather, land use and plants and animals.
- There are an abundance of native languages spoken throughout the continents of North and South America. However, the primary languages of this region are English, Spanish and French.

North and South America

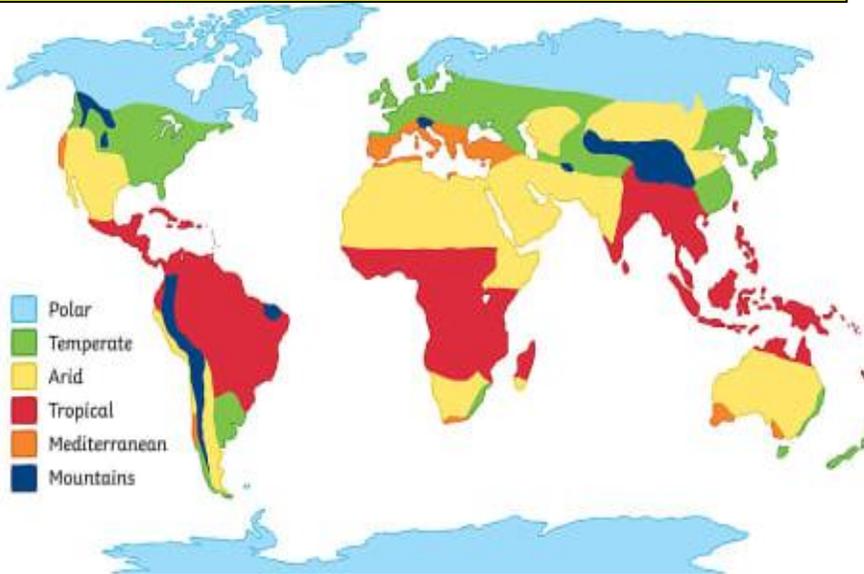

We use compass points to describe position and direction. Compasses have been used for over 2000 years. There are four main (cardinal) points of the compass: north, south, east and west. An 8-point compass has directions in between the main cardinal points: northeast, southeast, southwest, northwest.

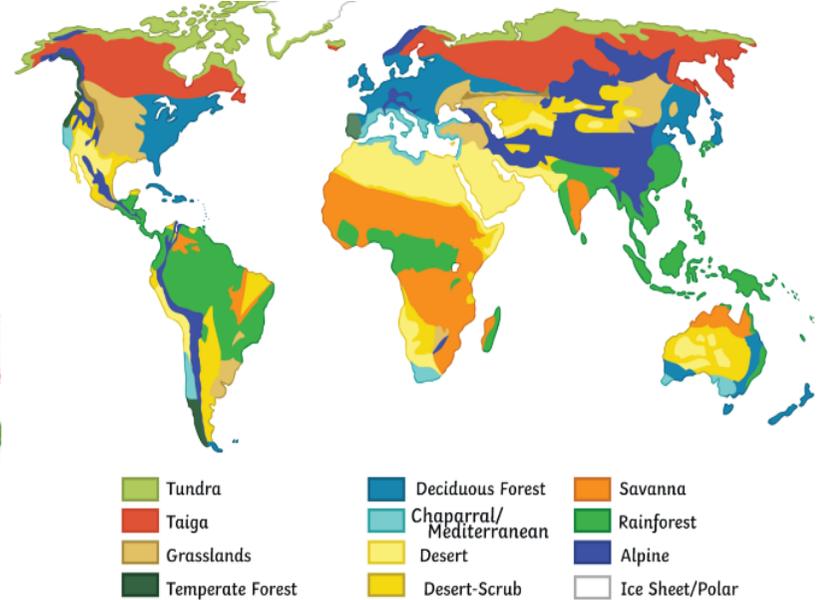

A grid reference allows someone to mark a place on a map by referring to vertical and horizontal lines called 'eastings' and 'northings'. The further East the 'eastings' are, the higher the number - the same applies for 'northings'. By using a two, four or six-figure reference point, it is possible to pinpoint a certain area of interest on the map to a varying degree of accuracy.

Climate zones

Biome zones

<p>Human features</p>	 <p>Havana, Cuba</p>	 <p>The Statue of Liberty, USA</p>	 <p>Chris the Redeemer statue, Brazil</p>	 <p>Machu Picchu, Peru</p>	 <p>The Golden Gate Bridge, USA</p>
<p>Physical features</p>	 <p>Argentina</p>	 <p>The Grand Canyon, USA</p>	 <p>Amazon Rainforest, Brazil</p>	 <p>Niagara Falls, Canada</p>	 <p>Andes Mountains, South America</p>
